

Quality Laundry Equipment To Fit Your Needs

In an effort to provide for the needs of all our customers, we are proud to offer you access to high quality garment finishing equipment from Leonard Automatics, Inc. Their tradition has always been to build better products with better materials, and engineered with customer operations in mind.

Image® Mini Series

Image® Mini Series is perfect for large retail dry-cleaning, formal wear and smaller industrial facilities. It utilizes a straight through stainless steel screw conveyor that allows for easy loading directly onto the conveyor without the need of any auto-loading devices and unloads automatically onto a garment storage rail. It is available in either gas or steam heat.

Image® Series

The big brother of the Mini, the Image® Series finisher is a high capacity straight through tunnel finisher ideally sized for customers in the heavy OPL to light industrial market segment. Just like all Leonard tunnels, The Image® Series is fully modular and can be either steam or gas heated.

Vision® Series

The Vision® Series is a “U-turn” style tunnel that significantly increases production over a straight through finishers. Sized for large industrial laundries, the Vision® is able to maintain the highest capacity needed by the very largest laundries. Add to this the patented **simple addition**® modular design, and the Vision® is the last tunnel you will ever need to buy.

Transporter® Conveyor

The Transporter® is the only upright pendant conveyor composed entirely of stainless steel and designed specifically for operation within a tunnel finisher. The high tensile strength allows for greater work loads, and it has been designed to be a direct replacement for many existing systems.

Slant Table & Hanger Stands

Ergonomically friendly hanging stations will help your production staff work faster and work happier. The height adjustable table and hanging stands brings the work to the right height to minimize stress on the worker.
